SUMMARY

Computer Science student at UC Irvine (GPA 3.96) with experience in full-stack development, systems design, C++, and cloud computing. Built and deployed real-world software systems; strong in debugging, performance optimization, and testing.

SKILLS

Technical Skills	Python, C++, TypeScript, JavaScript, LangChain/LangGraph, Git, AWS (Lambda, EC2, S3, DynamoDB, API Gateway, CloudWatch, EventBridge), GCP Document AI, GraphQL, PostgreSQL, REST APIs, Docker
Relevant Coursework	Data Structures & Algorithms, Computer Networks, Computer Organization, Operating Systems, Systems Design, Software Engineering, Machine Learning, Security & Privacy

WORK EXPERIENCE

PreSage.ai – Founder & Software Engineer	Sept 2025 – Present
– Founded an AI-powered document extraction SaaS used by real clients, cutting processing time by 90% – Architected a scalable GCP Document AI pipeline with OCR, LLM integration, and ETL to PostgreSQL – Built full-stack REST API dashboards in Python with unit testing, monitoring, and accuracy validation – Managed GCP Cloud Run infra with CI/CD pipelines, dev/prod separation, and documentation	
Zyprova – Software Engineering Intern	June 2025 – Sept 2025
– Built MCP-compliant microagents with Agent2Agent to automate data retrieval across services – Optimized GraphQL + SQL pipelines for performance, reducing query latency and improving reliability – Collaborated in Agile sprints and code reviews; contributed to software requirements and system design – Debugged HR and Finance microservices by refining schemas, resolvers, and integration flows	
Pneumonia Detection Research – SRA at UCSB	July 2023
– Developed and tested a PyTorch CNN for pneumonia detection from X-rays, achieving 88.75% accuracy – Authored an 8-page research paper with system diagrams and presented to 400+ faculty and students	

PROJECTS

DiscounTrack – Browser Extension	Jul 2025 – Aug 2025
– Built and deployed a Chrome extension with backend service for automated price tracking and alerting – Designed serverless architecture using AWS Lambda, DynamoDB, EventBridge, and REST APIs – Integrated Flask and AWS SES for real-time product monitoring; optimized polling for performance	
InShort – Civic Engagement Platform	Jun 2025
– Built a cross-platform civic engagement app connecting a SwiftUI frontend to a Python FastAPI backend – Integrated legislative APIs with vector embeddings to deliver personalized, real-world policy insights	
Echo – Creative Freelancing Platform	Apr 2025
– Developed a multimodal Python agent to generate and iteratively refine prompts for diffusion models – Built a feedback loop with unit-tested logic enabling continuous image enhancement based on user input	

EDUCATION

Sept 2024 – June 2027	B.S. Computer Science at University of California, Irvine (GPA: 3.96/4.0)
June 2025	DroneCamp Certificate at CSU Monterey Bay (Jun 2025)
